First and foremost, the permit for the Whistling Ridge Energy Project had an expiration of March 5, 2022, and during this time, nothing was done, so how can you transfer a project that has expired over two years ago. It is my understanding that there is no process in place to keep the permit alive and no one has tried to do this before and to set precedence on an expired project is questionable at best. I was advised that SDS Lumber Company has already transferred the permit and the project to Twin Creek Timber LLC without EFSEC approval. EFSEC rules state that ownership or the rights of the project cannot be transferred without EFSEC approval and to do so would be breaking the law. If EFSEC were to approve the transfer of the Site Certification Agreement for a project that has expired and that has already be done without their approval would reflect poorly on EFSEC and it's members. I urge you to deny this request.
