Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Joshua Henderson

Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

Finally, having at one time lived in Washington state, I know firsthand how beautiful the state is and that has given me a sense of responsibility for keeping the environment clean and beautiful for future generations to enjoy. I believe that putting this project together would spell an environmental mess for the area-one well beyond our means to clean it up.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Subject: Comment re: Tesoro oil terminal in Vancouver

To the Energy Facility Site Evaluation Council,

I am opposed to the construction of the Tesoro-Savage oil terminal proposed for the port in Vancouver, WA. Transportation by rail of oil from the Bakken Shale reserves in N. Dakota and Canada has already proved quite hazardous. There are many recent train derailments on record, to name a few: the catastrophic derailment, explosion and large oil spill in Lac Megantic, Quebec, Canada last July 2013 killing 47 people and burning the town. On November 8, 2013 in Alabama, there was a derailment of 20 cars, an explosion, and an oil spill into a surrounding wetlands area. This train also carried Bakkan oil which is quite volatile. There are numerous other recent derailments of trains carrying oil throughout the US. Do you want this level of hazard risk for Vancouver and the Columbia River?

I have another health concern, that of greatly increasing rail traffic and diesel pollution throughout the Columbia River Gorge.

I've worked as a pediatric occupational therapist in special education in Vancouver, WA for over 25 years. We in public education have witnessed a profound increase in the number and severity of children (per capita) with neurodevelopmental disorders such as autism, attention deficit hyperactivity disorder (ADHD), learning disabilities, mood dysregulation, and cognitive delay. The Centers for Disease Control and Prevention (CDC) collaborates this increase in their recent counts of pediatric disorders on their website.

This is likely due in part to increased exposures to neurotoxic chemicals in the environment. Particulates from diesel exhaust have recently been associated with Autism and Attention Deficit Hyperactivity Disorder. Diesel components can cause permanent damage to the developing nervous systems of embryonic and young children, even at low levels. An enormous increase in our local population's exposure to neurotoxins, supplied by diesel particulates from a lot more trains will predictably increase neurodevelopmental impairments in Pacific NW children even further. This will be at large cost to our society. It creates jobs for special education professionals and ultimately, for long term care facilities.

Before you approve the permit for the oil terminal, please do a cumulative Health Impact Assessment that includes a public scoping process.

Thank you,

Marjorie Kircher, MS OTR
Occupational Therapist, Registered

FYI, here are several recent scientific articles Linking Diesel Exhaust to Neurodevelopmental disorders: (Links below will take you directly to the full articles).

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.
