Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Bert Leysath

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Thomas Becker

Subject: Scoping comments for Tesoro Savage proposal in Vancouver

Dear

As a community member, outdoor wilderness guide and graduate student in the University of Washington's School of Forest Resources, I am very concerned about the proposed Tesoro Savage project at the Port of Vancouver. I urge you to fully assess the impacts of this proposal to transport up to 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver, and other Northwest communities.

I urge you to include in the scoping of this proposal the implications to public safety, environmental impacts, and the health of our communities. These deserve a spotlight in the assessment of the state's largest oil-by-rail terminal proposed. Including,

- * The compounding impact of multiple trains going through communities daily on traffic, community safety, and air quality;
- * The threat of oil spills from trains and marine vessels along the Columbia, the Pacific Ocean, and the Puget Sound;
- * The ability of communities to respond to an oil spill sourced from the Bakken oil fields and the Canadian Tar Sands safely and in a timely manner;
- * The increase in oil tankers and the corresponding increased risk of oil spills throughout Washington waters and beyond;
- * The project's impact on climate change. This analysis should include climate change impacts from crude oil from Bakken to Tar sands, cradle to grave;
- * Safety of crude oil being transported by rail and the risks to communities along the route; and
- * Terminal safety precautions related to the type and source of oil, level of combustion, and air emissions.

Thank you.

Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear EFSEC Commissioners

I am a Savage employee and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. As a Savage employee, I stand behind the company's commitment to safety and the environment. I have firsthand experience how important clean, efficient and safe operations are to Savage. A terminal run by Savage in Vancouver will bring the community jobs like mine. And I'm proud to say I work for this company, and I'm also proud of our impressive track record of integrity and social responsibility.

This terminal will also contribute to energy independence in the United States. I work in the Savage operation in and know the market demand for moving crude oil to West Coast refineries. This terminal will make the transportation of crude oil from the Bakken and other regions more accessible and reduce the amount of crude US refineries are currently forced to purchase from international sources. By allowing US crude to move through a US terminal to US refineries, Savage and Tesoro are supporting US energy independence and creating US jobs.

I urge the committee to keep site of the positive impact this terminal will have on the US economy. As a Savage employee and an American job holder, my family depends on the strength of the oil and gas market in the US. To keep this project moving forward on a schedule that will allow for its timely approval, please keep the scope of the SEPA environmental analysis purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility. This balanced approach is consistent with Washington's SEPA statutes and regulations and will protect the environment while also ensuring the state's ability to grow its economy.

Thank you for considering my comments.

Sincerely,
James Williams

Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Karen Stamm

Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear EFSEC Commissioners

I am a Savage employee and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. As a Savage employee, I stand behind the company's commitment to safety and the environment. I have firsthand experience how important clean, efficient and safe operations are to Savage. A terminal run by Savage in Vancouver will bring the community jobs like mine. And I'm proud to say I work for this company, and I'm also proud of our impressive track record of integrity and social responsibility.

This terminal will also contribute to energy independence in the United States. I work in the Savage operation in California and know the market demand for moving crude oil to West Coast refineries. This terminal will make the transportation of crude oil from the Bakken and other regions more accessible and reduce the amount of crude US refineries are currently forced to purchase from international sources. By allowing US crude to move through a US terminal to US refineries, Savage and Tesoro are supporting US energy independence and creating US jobs.

I urge the committee to keep site of the positive impact this terminal will have on the US economy. As a Savage employee and an American job holder, my family depends on the strength of the oil and gas market in the US. To keep this project moving forward on a schedule that will allow for its timely approval, please keep the scope of the SEPA environmental analysis purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility. This balanced approach is consistent with Washington's SEPA statutes and regulations and will protect the environment while also ensuring the state's ability to grow its economy.

Thank you for considering my comments.

Sincerely,
Jason Farris

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

Excess oil should be held in national reserves for use only in cases of a national emergency. Exploitation of additional oil, coal or gas needs to be left in the ground only to be used in the case of a national emergency. These reserves should only be exploited to the extent where it supports industries and infrastructure in this country.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.
