**To:** EFSEC (UTC)  
**Subject:** Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

cheryl stgeorge

Stephen Posner  
Interim EFSEC Manager  
Energy Facility Site Evaluation Council  
PO Box 43172  
1300 S Evergreen Park Dr. SW  
Olympia, WA 98504-3172

I am a San Juan County property owner. The economy of San Juan County relies upon the environmental beauty of the islands. I am VERY concerned about the potential impacts from the proposed Tesoro Savage Petroleum Terminal LLC in Vancouver to the economy of San Juan County.

Please thoroughly study the following:

What would be the adverse impacts including the increased risk of a major oil spill from the increased barge or ship traffic to/from Tesoro refinery at Anacortes that would have to travel adjacent to the waters of San Juan County? What would be the loss of property values and what would be the loss of tourism, real estate sales, and housing construction related tax revenue from a single major oil spill in San Juan County; from multiple moderately-sized fuel spills over time; and from multiple small-sized fuel spills over time?

Thank you for your diligence!

**Subject:** Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Karen Lawrence

**To:** EFSEC (UTC)  
**Subject:** Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Joyce Winebrenner

<morkabu@aim.com>  
**Sent:** Saturday, December 07, 2013 8:19 PM  
**To:** EFSEC (UTC)  
**Subject:** Comment on Docket No. EF-131590, Application No. 2013-01

Dec 7, 2013

Mr. Stephen Posner  
P.O. Box 43172  
Olympia, WA 98504-3172

Mr. Stuart Mork  
7710 31st Ave NW  
Seattle, WA 98117-4642  
(206) 781-0336

Dear Mr. Posner,

I'm writing regarding Docket No. EF-131590, Application No. 2013-01 to urge the Washington Energy Facility Site Evaluation Council (EFSEC) to assess the full environmental and public safety impact of the joint Tesoro-Savage proposal to turn the Port of Vancouver into a major crude oil export terminal.

If approved, the plan would result in 380,000 barrels of oil each day being shipped through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and other Northwest communities. Oil-by-rail is a bad deal for Washington State. The project comes at a steep price for rail communities and the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to recommend the rejection of Tesoro-Savage's proposal.

The public safety and environmental impacts of this proposal deserve close scrutiny. For example, EFSEC must assess:

1) The potential safety and environmental impacts of a large train-related oil spill or explosion along the rail route in Washington and beyond. Recent derailment disasters in Lac-Mégantic, Quebec and Alabama have shown that these risks are far too real. The tragedy in Quebec, in particular, highlighted the extreme danger of the same type of oil and tankers that would be traveling through our communities.

Forty-seven people died in that explosion, which also devastated the town.

2) The increased risk of an oil tanker spill on Washington State waters and along the shipping route.

3) The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route.

This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.

4) The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

5) The impact of the project's cradle-to-grave CO2 emissions on the viability of the large oyster industry in Washington State.

After carefully considering the safety, environmental, and climate risks associated with the proposed oil terminal, I respectfully ask you to recommend the rejection of Tesoro-Savage's application.

**Categories:** Purple

Dec 8, 2013

Energy Facility Site Evaluation Council  
WA

Dear Site Evaluation Council,

Please deny the permit for the Tesoro Savage Vancouver Energy Distribution Terminal.

The proposed Tesoro Savage project would transport 360,000 barrels of oil per day through the Columbia River Gorge National Scenic Area. I have grave concerns about this proposal and its impact on the Columbia River Gorge National Scenic Area. The scope of review under the State Environmental Policy Act (SEPA) must include the following:

What is the purpose of the project? The purpose statement must not be narrowly worded to only include the construction of an oil terminal for distribution of oil through the region. The purpose should be broad enough to include providing for the energy needs of the region and providing opportunities for appropriate waterfront development in Vancouver that benefits the local community.

Is there a need for this project? There is not. This proposal, in conjunction with other existing and pending oil terminals, would result in a glut of oil in the Northwest that would far exceed current consumption. There are alternative waterfront development opportunities that would create jobs and generate greater benefits for the local community.

What are the alternatives? A "no action" alternative; an alternative relying on other oil terminals that already exist, are in the permitting process or under construction; and reducing reliance on fossil fuels all must be considered as viable alternatives. Transport routes that do not pass through congressionally protected areas, like the Columbia River Gorge also must be included in the alternatives analyses. The EIS should also consider reasonably foreseeable waterfront development opportunities that would be incompatible with an oil terminal, such as mixed use development with waterfront amenities.

What are the direct, indirect and cumulative effects of the proposal, including transportation impacts on the Columbia River Gorge National Scenic Area, such as:

- Increased air pollution from train diesel emission. The Gorge already suffered from smog and visibility impairment up to 95% of the time.
- Rail expansion into sensitive areas. Rail lines in the Gorge are currently near capacity. This proposal and other oil by rail and coal export proposals would result in rail infrastructure expansion into sensitive areas in the Gorge, including

wetlands, fish and wildlife habitat, rare plant habitat, and cultural resource sites. These likely impacts must be included in the scope of review.

- Likelihood of accidents. Current coal train traffic in the Gorge has resulted in massive amounts of coal dust escaping the open topped rail cars, which weakens the train ballast and causes accidents. The U.S. Surface Transportation Board has determined that coal dust is a "pernicious ballast foulant," weakening rail lines and resulting in derailments. The likelihood of oil train derailments, the likely effects on the Columbia River Gorge and the impacts on communities must be analyzed.

- Adverse effects to resources protected by the Columbia River Gorge National Scenic Area Act. The project's indirect and cumulative effects on the scenic, natural, cultural and recreation resources of the Columbia River Gorge National Scenic Area must be included in the scope of review.

In conclusion, SEPA requires that the EIS address impacts to sensitive or special areas, such as the Columbia River Gorge, and the degree that the proposal would conflict with state, local, and federal protections for the environment, such as the Columbia River Gorge National Scenic Area Act. WAC 197-11-330(3)(e)(i), (iii). State law also requires the Governor and all state agencies to carry out their respective functions in accordance with the Columbia River Gorge National Scenic Area Act.

RCW 43.97.025. EFSEC and the Governor are required to review projects for their impacts on the Columbia River Gorge and to take actions to avoid those impacts.

Thank you for considering these comments and including them into the official record.

Sincerely,

Ms. . Steel  
General Delivery

RE: Docket No. EF-131590  
Application No. 2013

Dear Mr. Posner,

Thank you for this opportunity to provide scoping comments for preparation of the Tesoro Savage Vancouver Energy Distribution Terminal (Tesoro Savage). Please accept the following comments from myself, my wife Belinda and my two daughters.

We are opposed to this terminal for many reasons, both globally and regionally.

At the global level, we believe continuing development of fossil fuel infrastructure - given all we know about its' contribution to global warming - is frankly suicidal. We could back this up by citing a dozen reports or studies out of the thousands that back up this assertion, but I assume you are receiving plenty of those from other concerned folks.

At the regional level, we are currently facing proposals for oil and coal terminals from Oregon to British Columbia. While our public process is set up to look at each project individually, a more holistic approach would make much more sense - as the cumulative impacts are enormous. We have already decimated our salmon populations, orca population, herring population as well as numerous other species through the cumulative effects of development over the last century. The cumulative effects make a farce of the Environmental Impact process as a whole. We believe we have reached the point where enough is enough. We need to begin repairing the damage we have already done and not waste time discussing proposals to do further damage.

We believe these terminal proposals represent a tipping point. From here we either continue the inevitable slide toward ecological disaster or we begin to repair the damage. We urge you to decline permitting for this terminal so we can start down the road to a clean-fuel economy.

Respectfully,

Joseph Herrin, Belinda Bail, Audrey Herrin and Marina Herrin

**Subject:** Opposition to oil transport through Columbia River Gorge

*This is from my letter to the editor in the Vancouver, Hood River, White Salmon and The Dalles newspapers:*

*As I was sitting in my yard in White Salmon this past weekend enjoying the warm sun and the crisp fall air, my attention was diverted to the sound of the train as it blasted it's horn through Bingen. Although this is a common occurrence for residents of the gorge, the future effects of the increased train traffic are impossible to ignore.*

*We live in paradise here in the Columbia River Gorge. Our precious natural resources of clean air, water and soil are incredible gifts only dreamed of by millions of people throughout the world. The citizens of this area, along with those along the Columbia River east to Wyoming will receive no benefit from increased train traffic filled with open cars of coal traversing our lands day after day after day.*

*I spent a majority of my life living in Kentucky and the Blue Ridge mountains of Virginia and Georgia. I have seen the ashy, drab grey that covers bridges, buildings and homes.*

*I have heard the "romantic" horn of the train all day and night to the point in which silence becomes a distant memory. And I have smelled the acrid dust-filled air that fills our lungs with every breath.*

*My husband and I used to dream of living in a place with clean air and water. Years ago when our children were born in Louisville, Ky., our pediatrician encouraged us to move west for clean air due to our young son's severe asthma and environmental allergies.*

*Every day we would read news stories about the negative impact of coal dust on the communities throughout Kentucky: asthma and serious allergies at all-time high levels due to the the air-borne dust from the coal trains, the waste from the burning of the coal, and finally the acid rain filled with minutecarcinogenic particles that fall from the clouds.*

*Now more than ever our community needs to join together and speak up, act out and stop the impending environmental disaster that will occur if we allow coal to be dug from our precious land in Wyoming and transported to China through this beautiful paradise we call home.*

*Once this project gets under way, it will be next to impossible to stop the constant noise, air and water pollution that will forever stain our land a bleak, drab grey.*

**To:** EFSEC (UTC)  
**Subject:** Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

The GOP-BIG OIL CABAL has numerous horrific accelerations in motion that will put the planet over a permanent, irreversible cliff 2015 including:

- 1) 18 train cars of coal being shipped to the West coast to go off and be burned in China
- 2) 7-17% of the all the massive fracking volume of methane is leaking into the atmosphere. It's 21 to 30 times more destructive than carbon dioxide. If more than 1% of that massive volume leaks into the atmosphere it's dirtier than coal.
- 3) The processing of the filthiest of the carbon products, tar sands and oil shale, will spew 30-70% more pollution into an already saturated atmosphere, filled with 400 parts per million of pollution. When, not if, we reach 1000 parts per million all of the ice will have melted, raising sea level by more than 215 feet. West Antarctica is anticipated to melt by 2050 & it alone will raise sea level by 25 feet affecting 140 million people and damaging \$35 TRILLION in assets according to the report in the September 2013 issue of the National Geographic.
- 4) There's already a massive methane cloud hanging out over the Atlantic from all the methane being released from the ice balls in the warming ocean.
- 5) There's 10 times the amount of greenhouse gases trapped in the permafrost, than are already in the atmosphere. They use to drive across that permafrost like it was asphalt and now the tracks get stuck up to their axles, because that's how much has already melted. Much of those greenhouse gases are the highly destructive methane, which is 21 to 30 times more destructive than carbon dioxide in the atmosphere, holding onto that much more heat. Then the oceans reach up and grab 94% of that heat out of the atmosphere, causing the ice sheets to melt faster, the methane to be released from the ice balls even faster, driving more moisture off the oceans which in turn makes the atmosphere unstable producing more severe storms.

We could be growing GDP by 158% with MILLIONS of JOBS, leave the DEBT in the dust, and get a Sustainable Future; instead the GOP-BIG OIL CABAL have numerous "DEATH SPIRAL" policies in motion. (REINVENTING FIRE by rmi.org)

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.
