Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear EFSEC Commissioners

I am a Tesoro employee from and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. As a Tesoro employee, I stand behind the company's commitment to safety and the environment. I have firsthand experience of how important safe, clean, and efficient operations are to Tesoro.

This terminal will also contribute to energy independence in the United States. Because of my job, I understand the market demand for moving crude oil to West Coast refineries. This terminal will make the transportation of crude oil from the Bakken and other regions more accessible and reduce the amount of crude U.S. refineries are currently forced to purchase from international sources. By allowing U.S. crude to move through a U.S. terminal to U.S. refineries, Tesoro and Savage are supporting U.S. energy independence and creating U.S. jobs.

I urge the committee to bear in mind the positive impact this terminal will have on the U.S. economy. As a Tesoro employee and an American job holder, my family depends on the strength of the oil and gas industry in the U.S. To keep this project moving forward on a schedule that will allow for its timely approval, please keep the scope of the SEPA environmental analysis purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility. This balanced approach is consistent with Washington's SEPA statutes and regulations and will protect the environment while also ensuring the state's ability to grow its economy.

Thank you for considering my comments.

Sincerely,
Jeffrey Demet

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

R. Moress

Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear EFSEC Commissioners

I am a Savage employee and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. As a Savage employee, I stand behind the company's commitment to safety and the environment. I have firsthand experience how important clean, efficient and safe operations are to Savage. A terminal run by Savage in Vancouver will bring the community jobs like mine. And I'm proud to say I work for this company, and I'm also proud of our impressive track record of integrity and social responsibility.

This terminal will also contribute to energy independence in the United States. I work in the Savage operation in and know the market demand for moving crude oil to West Coast refineries. This terminal will make the transportation of crude oil from the Bakken and other regions more accessible and reduce the amount of crude US refineries are currently forced to purchase from international sources. By allowing US crude to move through a US terminal to US refineries, Savage and Tesoro are supporting US energy independence and creating US jobs.

I urge the committee to keep site of the positive impact this terminal will have on the US economy. As a Savage employee and an American job holder, my family depends on the strength of the oil and gas market in the US. To keep this project moving forward on a schedule that will allow for its timely approval, please keep the scope of the SEPA environmental analysis purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility. This balanced approach is consistent with Washington's SEPA statutes and regulations and will protect the environment while also ensuring the state's ability to grow its economy.

Thank you for considering my comments.

Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear Stephen Posner

I am a resident of Washington and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. The proposed project will receive and ship North American crude oil to US refineries to offset or replace foreign imports and declining production in Alaska and California. This crude oil will be refined in US refineries to help meet the everyday needs of residents and businesses along the US West Coast – including those of the state of Washington. In short, it helps with America's energy security and will bring economic benefits and valuable jobs to our local communities.

As a resident, I believe the safety and environmental reviews are extremely important and will help ensure that this is done safely and responsibly. As such, I would request that the scope of the SEPA environmental analysis be purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Risks caused by earthquakes
- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Protection of Columbia River water quality and fish and wildlife resources
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility and have a dampening effect on transportation of other commodities, such as agricultural products, which are vital to the economies of Vancouver, Clark County and the state of Washington.

This balanced approach is consistent with SEPA statutes and regulations and will protect the environment while also ensuring the state's ability to grow its economy.

Thank you for considering my comments.

Sincerely,

Aaron Kraft
Vancouver resident and support of the project

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Subject: re: the shipping of crude oil through Spokane, WA

Importance: High

I just want to register my opposition to the shipment of crude oil by rail through Spokane and through the State of Washington on a daily basis through the oil tankers that are the same type as the horrific derailment explosion that killed 47 people in Quebec in July. I understand that just a few weeks ago there was another derailment that happened in Alabama.

In the Alabama, fortunately no was killed.

Taking such risks of people's lives by the shipment of oil by train should not be permitted!

It obviously is also extremely unsafe for the environment for such accidents to happen and to have large amounts of oil spilled on the ground!

Prior to such future shipments, the oil companies that are promoting such shipment by trains need to make sure that the train oil tankers are drastically improved to be able to withstand such accidents!

I unfortunately cannot be at the Port of Vancouver hearing or the Spokane meeting on December 11th.

I am a registered voter and live in the city of Spokane, WA.

Dear Stephen Posner

As a resident of Washington and a refinery contractor, I am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. The proposed project will allow US refineries to offset or replace foreign crude oil imports with domestic production. Bringing this energy to Vancouver is a big win for everyone – including residents of Washington state. In short, it helps with America’s energy security and will bring economic benefits and valuable jobs to our local communities.

I believe the safety and environmental reviews are extremely important and as an outdoor enthusiast and practicing engineer, I will do whatever I can to ensure that this is done safely and responsibly. As such, I would request that the scope of the SEPA environmental analysis be purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Risks caused by earthquakes
- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Protection of Columbia River water quality and fish and wildlife resources
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility and have a dampening effect on transportation of other commodities, such as agricultural products, which are vital to the economies of Vancouver, Clark County and the state of Washington.

This balanced approach is consistent with SEPA statutes and regulations and will protect the environment while also ensuring the state’s ability to grow its economy. Thank you for considering my comments.

Sincerely,
Tom Schafer

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Phyllis Jenkins

Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear EFSEC Commissioners

I am a Tesoro employee from California and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. As a Tesoro employee, I stand behind the company's commitment to safety and the environment. I have firsthand experience of how important safe, clean, and efficient operations are to Tesoro.

This terminal will also contribute to energy independence in the United States. Because of my job, I understand the market demand for moving crude oil to West Coast refineries. This terminal will make the transportation of crude oil from the Bakken and other regions more accessible and reduce the amount of crude U.S. refineries are currently forced to purchase from international sources. Additionally, this West Coast crude movement will utilize Jone's Act ships, further supporting the broader U.S. economy relative to an international crude movement. By allowing U.S. crude to move through a U.S. terminal to U.S. refineries, Tesoro and Savage are supporting U.S. energy independence and creating U.S. jobs.

I urge the committee to bear in mind the positive impact this terminal will have on the U.S. economy. As a Tesoro employee and an American job holder, my family depends on the strength of the oil and gas industry in the U.S. To keep this project moving forward on a schedule that will allow for its timely approval, please keep the scope of the SEPA environmental analysis purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Spill prevention and spill response requirements that protect the environment

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Joan Beckham

Subject: Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.

Subject: Tesoro Savage Vancouver Energy Distribution Terminal

Dear EFSEC Commissioners

I am a Tesoro employee from Anacortes, Washington and am writing in support of the Tesoro Savage Vancouver Energy Distribution Terminal. As a Tesoro employee, I stand behind the company's commitment to safety and the environment. I have firsthand experience of how important safe, clean, and efficient operations are to Tesoro.

This terminal will also contribute to energy independence in the United States. Because of my job, I understand the market demand for moving crude oil to West Coast refineries. This terminal will make the transportation of crude oil from the Bakken and other regions more accessible and reduce the amount of crude U.S. refineries are currently forced to purchase from international sources. By allowing U.S. crude to move through a U.S. terminal to U.S. refineries, Tesoro and Savage are supporting U.S. energy independence and creating U.S. jobs.

I urge the committee to bear in mind the positive impact this terminal will have on the U.S. economy. As a Tesoro employee and an American job holder, my family depends on the strength of the oil and gas industry in the U.S. To keep this project moving forward on a schedule that will allow for its timely approval, please keep the scope of the SEPA environmental analysis purposefully focused on potential impacts from the proposed facility. The scope of the EIS must be limited to those potential impacts directly related to the facility design and operation. I ask that EFSEC consider the following site-specific impacts in preparation of the SEPA Environmental Impact Statement:

- Spill prevention and spill response requirements that protect the environment
- Ability to comply with state and federal air quality emission standards
- Impact of the facility on local transportation infrastructure and public services
- Facility design that meets all relevant safety standards

I am concerned that conducting a SEPA EIS that looks beyond site-based facility impacts is an overreach that could dilute the core focus on this facility. This balanced approach is consistent with Washington's SEPA statutes and regulations and will protect the environment while also ensuring the state's ability to grow its economy.

Thank you for considering my comments.

Sincerely,
K. Justin Williams

Subject: Tesoro terminal scoping comment

Dear members of efsec

This is my second comment on this project since I have more information about Tesoro.

I have reviewed the history of Tesoro on the web from oil industry sources, Bloomberg, wiki, and WA states own history encyclopedia. Standouts include deaths of seven workers at a refinery in Anacortes in 2010 and pipeline leaks in a farmers field this past September. This company cannot be trusted.

The petrochemical and oil industry is shooting its own foot off, soiling it's own nest by refusing to have safe, well repaired, or new, and well monitored infrastructure and industrial complexes. Tesoro is one well known offender

By an odd coincidence I happened to read an article in the Vancouver Canada press voicing concern about the possible flotilla of oil tankers in it's harbor, picking up oil from the Baaken and the Tar Sands. I wonder about the number of tankers crossing that Columbia river bar, which has a bad rap .The rail lines along the gorge are not stable. I imagine the last thing Bonneville Power wants is an oil spill getting into it's turbines! There are a few dams between Pasco and Vancouver.

I think China is waking up to it's dangerous pollution problem in it's major cities, and by the next generation just might have developed options to coal and petroleum for energy. The Tesoro proposal anticipates the terminal won't be needed in twenty years anyhow.

I do not see how approving this terminal will have much benefit for the citizens of Washington. The risks outweigh the benefits that will only be around for twenty years, according to Tesoro.

Sincerely,
Barbara Morrissey

Subject: Scoping comments for Tesoro Savage proposal in Vancouver

Dear

As a community member, I am very concerned about the proposed Tesoro Savage project at the Port of Vancouver. I urge you to fully assess the impacts of this proposal to transport up to 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver, and other Northwest communities.

I urge you to include in the scoping of this proposal the implications to public safety, environmental impacts, and the health of our communities. These deserve a spotlight in the assessment of the state's largest oil-by-rail terminal proposed. Including,

- * The compounding impact of multiple trains going through communities daily on traffic, community safety, and air quality;
- * The threat of oil spills from trains and marine vessels along the Columbia, the Pacific Ocean, and the Puget Sound;
- * The ability of communities to respond to an oil spill sourced from the Bakken oil fields and the Canadian Tar Sands safely and in a timely manner;
- * The increase in oil tankers and the corresponding increased risk of oil spills throughout Washington waters and beyond;
- * The project's impact on climate change. This analysis should include climate change impacts from crude oil from Bakken to Tar sands, cradle to grave;
- * Safety of crude oil being transported by rail and the risks to communities along the route; and
- * Terminal safety precautions related to the type and source of oil, level of combustion, and air emissions.

Thank you.

Subject: Comment on Docket No. EF-131590, Application No. 2013-01

Dec 9, 2013

Mr. Stephen Posner
P.O. Box 43172
Olympia, WA 98504-3172

Dear Mr. Posner,

I'm writing regarding Docket No. EF-131590, Application No. 2013-01 to urge the Washington Energy Facility Site Evaluation Council (EFSEC) to assess the full environmental and public safety impact of the joint Tesoro-Savage proposal to turn the Port of Vancouver into a major crude oil export terminal.

If approved, the plan would result in 380,000 barrels of oil each day being shipped through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and other Northwest communities. Oil-by-rail is a bad deal for Washington State. The project comes at a steep price for rail communities and the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to recommend the rejection of Tesoro-Savage's proposal.

The public safety and environmental impacts of this proposal deserve close scrutiny. For example, EFSEC must assess:

1) The potential safety and environmental impacts of a large train-related oil spill or explosion along the rail route in Washington and beyond. Recent derailment disasters in Lac-Mégantic, Quebec and Alabama have shown that these risks are far too real. The tragedy in Quebec, in particular, highlighted the extreme danger of the same type of oil and tankers that would be traveling through our communities.

Forty-seven people died in that explosion, which also devastated the town.

2) The increased risk of an oil tanker spill on Washington State waters and along the shipping route.

3) The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route.

This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.

4) The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

5) The impact of the project's cradle-to-grave CO2 emissions on the viability of the large oyster industry in Washington State.

After carefully considering the safety, environmental, and climate risks associated with the proposed oil terminal, I respectfully ask you to recommend the rejection of Tesoro-Savage's application.

ENERGY FACILITY SITE
EVALUATION COUNCIL

Stephen Posner
Energy Facility Site Evaluation Council
PO Box 43172
300 S. Evergreen Park Dr. SW
Olympia, WA 98504-3172

Energy Facility Site Evaluation Council,

I urge you to reject the proposed Port of Vancouver oil terminal by Tesoro-Savage. The potential 300,000 barrels of crude oil that will be transported on the Columbia River ~~with~~ is a major environmental and human health hazard.

Please consider the increased likelihood of oil spills on our precious waterway. No matter how cautious the company is, accidents happen. These spills will harm the already fragile ^{river} ecosystem - including the salmon that bring ^{in millions of dollars} ~~in a lot of~~ revenue for both Oregon and Washington's sport fishing industry.

Oil spills also harm human health - ~~if~~ oil invades the bottom of the food chain, it will certainly trickle up to the top. Oil explosions can have disastrous effects as well - as we have learned from the recent oil explosion in Quebec. Innocent ~~two~~ people that just happen to live near trains carrying oil would be at risk.

The transport of this oil is not the only concern, the burning of the oil will contribute large amounts of carbon dioxide - a green house gas - into the atmosphere. NASA Scientist James Hanson has predicted that the Earth cannot ^{continue to} support life as we know it if the amount of CO₂ in the atmosphere is above 350 parts per million. We are now well above 400 parts per million and burning barrels of oil by the

millions. This can not continue, ~~if~~ without inducing even more climate change.

I am a restoration ecologist that spends most of my time and energy healing our ecosystems so that they can continue to provide the ecosystem functions humans need to survive (like water filtration, providing habitat for pollinators, etc.). A changing climate makes this work ~~even~~ more difficult. The plants and animals that historically lived in these locations may not be able to handle the increased temperatures and less summer rainfall that climate change will bring (and is already bringing!) to the Pacific Northwest.

Now is the time to reject fossil ~~future~~ fuels and embrace the ^{sustainable} energy of the future! Please say no to the Tesoro Savage proposed oil terminal. It is not in the public interest.

Thank you,
Tori Yoder
