Thank you, Gary Schaefer 54807 E.Badger Road Benton Cit, Wa 99320 I have some major concerns about the healthy effects for us that are living near those with large windmills not to mention the devaluation of land prices we are relying on for resale and also the total lack of concern for the legal process of county regulations that we have in place also the damage to all of the animals be it owls, hawks, deer, antelope, and all other animals that I have not mentioned

External Email Dear EFSEC: Horse Heaven Wind Farm Public Hearing Request This email is being sent to you as the lead agency to request a public hearing on the Horse Heaven Wind Farm project. According to the Washington State Environmental Policy Act Handbook 2018, "The lead agency is required to hold a public hearing if 50 or more local persons within the agency's jurisdiction or who would be adversely impacted by the proposal, make a written request within 30 days of the issue date of the draft EIS." The mere thought of all those mega tall space needle sized ugly windmills that will only generate electricity 40% of the time and often in spring and fall when we don't need it and their red light district flashing all night, every night of the 365 nights of the year would be an impact that is not currently considered. I can already see on my eastern horizon hundreds of those flashing red lights in western Walla Walla county on the 9 mile Windmill farm and if scum bag Scout jams these down our throat to see them to the western horizon as well on the unspoiled Horse Heaven Hills would be worse yet. Thank you, Kurt D. Clemmens 987 Lake Rd. Burbank, WA 99323 Sent from my iPhone

External Email Dear EFSEC: Horse Heaven Wind Farm Public Hearing Request This email is being sent to you as the lead agency to request a public hearing on the Horse Heaven Wind Farm project. According to the Washington State Environmental Policy Act Handbook 2018, "The lead agency is required to hold a public hearing if 50 or more local persons within the agency's jurisdiction or who would be adversely impacted by the proposal, make a written request within 30 days of the issue date of the draft EIS." The mere thought of all those mega tall space needle sized ugly windmills that will only generate electricity 40% of the time and often in spring and fall when we don't need it and their red light district flashing all night, every night of the 365 nights of the year would be an impact that is not currently considered. I can already see on my eastern horizon hundreds of those flashing red lights in western Walla Walla county on the 9 mile Windmill farm and if scum bag Scout jams these down our throat to see them to the western horizon as well on the unspoiled Horse Heaven Hills would be worse yet. Thank you, John Rose 2912 Rd 48, Pasco, WA. 99301

Q4. **Share any comment**

External Email I am reading and reviewing the Horse Heaven Hills DEIS. This is one complex and lengthy document that is filled with serious quality issues of note. I am requesting that at least one public meeting be held in the Tri-Cities and that the comment period be extended to accommodate providing the public adequate note and opportunity to comment at that public meeting. This project will have a disproportionate impact to the citizens of Benton County when compared to the number of people in proximity to every other wind project in the state combined. There are concerns about the risk of negative impacts on real estate values, on the wine industry, and on tourism. The public deserves to be recognized, listed to and understood. A public hearing will contribute to fulfilling the purpose of SEPA and assuring that a just and rationale outcome is achieved. I request that EFSEC reply to this request. It is being reported to me that more than fifty requests for a public meeting have been submitted. Appreciatively, Paul Krupin, BA MS JD 2404 South Lyle St. Kennewick WA 99337 509-531-8390 cell 509-582-5174 landline Paul@Presari.com

External Email I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Sincerely Patrick Walton

External Email I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Sent from Mail for Windows

External Email I don't know about the Horse Heaven C E Center but I agree with the concept. I personally think if we all had our own perpetual motion contraptions we could end this electricity problem for everyone forever. I even came up with the how to make it but am not an engineer so don't know how to produce a prototype. I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. External Email Dear People, So many of the services and conveniences we depend on in modern society require oil to fuel them. Even so, we must transition to cleaner, more economically and environmentally sound technologies. Such transitions will not happen overnight. We The People can facilitate the change by learning to use less, and make personal adjustments in our use of energy rather than condoning more of the same pollutive industrial practices. One way or another, we will be inconvenienced - either now, by choice - or in the long run, by necessity, when natural resources deplete and climatic dynamics dictate limited options. What will we choose? Some people love this globe like their own mother - have called it home for thousands of years. In fact, some recognize themselves, and this earth as part of a vast web of life that reaches far beyond the horizons of our world ... a sanctuary of life ... sacred grounds where dreams are born and we, as children of life, are held and nurtured. When we desecrate these sacred grounds, we rip that web to shreds - pollute the waters, foul the air, strip once fertile soils bare and dump our garbage everywhere - raping the beloved mother of life, destroying the cherished home. Is that how you treat your mother? Is that what you want for your home? Humans were created to care for this garden planet - not to pollute and destroy it. For the moment, we still have a choice. That moment will pass. Will we pass with it, or will we choose to heal the wounds and stop the wounding of these treasured grounds? I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center This is a good project with appropriately identified mitigation measures, backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement - so doing, we can set an example for the rest of the nation to follow. Thank you for your consideration. Sincerely, Kathleen Allen <https://tahomahome.weebly.com> ... peace in one breath one breath at a time

External Email Thank you for the Spanish notification. In a conversation with the Superintendent of Schools for KIBE school district serving Benton City, I was informed that they have a large percentage of children that are not proficient in English, which probably means their parents are not either. I noticed that the Spanish notification was posted January 22, vs. the English version on January 19. In the interest of equal opportunity and to avoid disparate treatment, I believe the comment period should be extended for a 3 day period.

External Email This project is massive and a horrible idea. This would destroy scenic vistas . Our tourism values and economic growth would be negatively affected. It needs to be put somewhere so many people would not be effected and not so conspicuous. 100 turbines would be visible from downtown Richland the main I-82 entrance to Kennewick would have towers on both sides. It would look terrible. Has an adequate analysis been completed to address the impacts it will have on the Tri-Cities, one of the largest populations in the State. There would be zero effect on carbon emissions because it would replace hydro power, a renewable energy. Washington State does not have a fossil fuel problem. Forget about this. The only people that would be happy are Gov. Insley and Olympia politicians. They would have a warm fuzzy feeling at our expense. Ted Lewis 686 S. Idaho Street Kennewick, WA 99336

External Email To whom it may concern, The Horse Heaven Clean Energy Center underscores the significant economic opportunity of building out Washington state's clean energy future. The project will help advance the state's ambitious climate goals while creating a substantial number of family-wage jobs and economic activity in Benton and Franklin Counties. Developing the project's hybrid combination of wind, solar, and battery storage applications will create as many as 930 jobs for skilled construction workers. Through building local access roads and foundations to support the technology, the project will employ crane operators, electricians, and skilled laborers. The project will be a significant source of employment in the local area. The jobs required by this project are high-paying, family-wage opportunities. Economic impact studies examining the project estimated the typical income per worker during the construction phase to be \$113,500. That's nearly 60% higher than the average regional compensation across industries and 37% higher than the compensation in the construction industry for Benton and Franklin Counties. The studies also showed that at full build-out, the project could amount to at least \$73 million in labor income and \$143 million in total economic output. Following construction, the project will also create a combined direct, indirect and induced total of 56 long-term high-paying jobs during its estimated 30-year life span. While the project brings clear and substantial benefits to families and workers in the local area, it will also help advance Washington state's broader clean energy economy. The project will keep workers busy in our Ports and shipping industry as the turbine parts make their way to the Tri-Cities. It will also drive further investments in new and existing workforce development and educational programs to prepare students for careers in the growing renewable energy sector. Such programs already exist at Walla Walla Community College, Bellingham Technical College, and Centralia College, all of which will increasingly be important as these projects continue to move forward. I urge EFSEC to advance this project to take advantage of these clear opportunities. Thank you for your consideration. Carly -- Carly Rang (she/they) Tri-Cities, WA

External Email I'm sending this email to the Public Hearing and Request for Comments. I pray that the people who have the power to approve or disapprove the installations of the wind farms on the Horse heaven Hills will decide to not approve installation. I'm sure you have read all the pros and cons for the installation of these wind turbines. First and foremost is the damage they will do to our beautiful hills, birds, animals and air. I'm told that the energy they produce will not be used by the tri-cities. So if that is true, then don't build them in our backyard. This is one project that shouldn't happen. They are both environmentally and economically a disaster. Wind turbines never pay for themselves. The only reason for their existence is because taxpayer money supports them. Again I will close begging you to not approve this. Sincerely Ira Johnson 509-987-3013

External Email Good day, I want to express my support of the Horse Heaven Hills Wind Farm Project for the following reasons: 1. We cannot continue to paint ourselves into a corner with fossil fuels - we must move to clean, renewable energy. This project lets us create clean, renewable energy right here in the TriCities. 2. We need jobs. This project will create nearly 1,000 jobs during construction and some after to maintain the site. 3. The farm just increases our existing wind farm so is already in place, just being expanded. 4. Money will go to Benton and Franklin counties and towards education. 5. Farmers need to continue to own and use their land. This revenue will help them survive and thrive without selling out to developers. I am a resident and home owner in Pasco, WA. Thank you, Pamela Gaudet --

External Email I am writing to you today to tell you that the wind project on Horse Heaven Hills is terrible! The Horse Heaven Hills are a beautiful view seen from all over the Tri-Cities and the wind turbines will ruin that view. I live in West Richland and will be affected by this view, as well as the noise, wind issues and sunlight glaring off the turbines. The "power" that will be made by these turbines will go to Western Washington! Why would we do that? Western Washington needs to figure out their own energy issues, not use our land and views for their benefit. For so long we on the eastern side of the Cascades, have been the step children of the west side of Washington. It's time for western Washington to take care of itself. I respectfully ask that you don't let the wind turbine project go forward. Thank you, Geneva Carroll West Richland, WA

External Email I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Gregry Loomis Seattle, WA Sent from Mail for Windows

External Email I am writing to express my STRONG OPPOSITION to the Horse Heaven Clean Energy Center! This project should NOT be placed so closed to a growing urban center like the Tri-Cities, WA. It will destroy much of the visual and desirable appeal of living in southeastern Washington State. Thank you for your consideration. Thank you, David L. Mitchell

External Email I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Sent from my iPhone David Christie
