I believe a moratorium on Siting this and other facilities until a compressive programmatic EIS is completed.

I was personally involved in reviewing and recommending approval for early wind projects in Eastern Washington and the Columbia Gorge

I recommended EFSEC undertake a programmatic EIS then and the need is even greater now.

The EIS should of course be comprehensive looking at impacts on this project - transmission, ability to integrate with other

BPA and other generation - and impacts to the land and water. I Reference the attached and request it also be inncuded in the record.
