Q3. **Are you part of an Agency or Organization?** No

Q4. **Share any comment**

Hi my name is Kevin Simmons. Hy house is closest 250 yards from the proposed solar farm.Is this the fourth extension they have asked for. Do they think the locals have changed their minds. Do they think this is similar to a county levy you just keep putting it out there until it works in their favor.If it weren't for our last governor saying he wanted so much green power in our state they probably wouldn't have applied for a permits. Rumor has it that the other large solar farm in our state was pushed through by the state even with all county commissioners and locals being against it. Possibly Avingrid thought this might happen here. Solar is considered green power is it really? How green is the process mining all the minerals and the manufacturing process? The fossil fuels used in mining and transportation of raw materials, delivering the finished product to the site. The fossil fuel used in the ground prep. I don't see any green here. If built it will be surrounded by a fence which be great for catching all the blowing weeds that they have to continually spray to keep control of. In the spring the snowmelt will was all the chemicals down the natural drainage's past the locals 100 year old hand dug wells. Possible contaminating them. We're not talking about a roof top solar panel. This is impacts thousands of acres that will be surrounded by a fence. Animal habitat that will be lost forever. And who's to say at the end of its life Avingrid doesn't just walk away leaving the land owner with the mess. You here about it happening. Federal subsidies to build probably not to remove. I just don't see any good to come out of this government subsidized, tax payer paid for project. This should not be classified as green power. The only green power is Hydro. Thank you for this opportunity to share my thoughts.
