Q1. **Name** Katie Copeland

Q2. **Email address** kcopeland@dreamscomehome.net

Q3. **Are you part of an Agency or Organization?** No

Q4. **Share any comment**

I am strongly opposed to the installation of a large-scale wind turbine farm in our rural and rapidly growing area. While I understand and support the importance of renewable energy, this particular project does not fit the character, needs, or long-term vision of our community. Our area is valued for its natural beauty, open landscapes, and peaceful setting — qualities that are driving responsible growth, new families, and local investment. A wind turbine farm would dramatically alter that landscape with industrial-sized structures, constant noise, light pollution, and potential impacts on property values. Beyond aesthetics, there are valid concerns about wildlife disruption, especially to birds and local ecosystems, as well as potential health and safety risks from turbine noise and shadow flicker for nearby residents. The proposed site's proximity to homes, schools, and recreational areas only heightens these concerns. There wind turbines are not cheap to fix and maintain, the use fossile fules to power them let alone the forever impact that the sturcture itself will have on the environment. We're not against renewable energy — we're against poorly placed industrial projects that disregard the community's character and quality of life. The government should explore alternative sites that are less densely populated and more appropriate for large-scale wind development, rather than forcing this project into a thriving rural area that's simply not suited for it.
