Q1. **Name** Mike Johnston

Q2. **Email address** mgjohnston@outlook.com

Q3. **Are you part of an Agency or Organization?** No

Q4. **Share any comment**

I have learned that Scout recently submitted an application to the FAA for approval of a layout based on 670' tall turbines. Are the .6 - 2.0 mile hawk buffers in the mitigation plan based on 500' tall turbines? If the buffers are based on 500' turbines, it seems that the additional 170' height of the turbines would require a larger buffer for a flying animal making regular trips to and from a relatively low nest.
