I am sending this email to express my concern about the planned Cascade Renewable Transmission.

I believe this plan will have devastating effects on local wildlife like salmon, lamprey, and sturgeon, which all play a vital role in our local ecosystem as well as the livelihoods of local fishers. The construction will also devastate the river and sediment habitats. There is also the concern of what happens if an earthquake or a boat strike the underwater power line. I am also concerned that the energy from this power line won't go to people who need it but to data centers that have proven to have adverse effects on the local environment, use up a lot of water, and pollute the water systems, effecting people and wildlife alike

I urge the Washington Energy Facility to put a halt to this plan and move forward in a way that won't harm our homes. I also urge the WEF to work with the Columbia River Inter-Tribal Fish Commission to plan ways to bring energy to residents and business in a way that doesn't harm the Columbia River.

Thanks,  
Sebastian Figueroa
