EFSEC,

The Horse Heaven Wind Farm project should be cancelled in its entirety for the following reasons: wind farms are NOT green energy as they destroy natural and farm land with wind turbines and they kill endangered species of birds and other wildlife; the Yakama Indian Nation opposes the placement of the wind turbines on their ancestorial Horse Heaven lands as do majority of people who live in the Tri-Cities; wind turbine blades when no longer usable don't degrade and remain toxic to the ground water; and; wind farms only operate 33% of the time i.e., they don't operate reliably 67% of the time to produce electricity. Stop this assault on the environment and the people.
