Hi, Tetra Tech is a bought off corporation by the renewable companies. The majority of the renewable companies pay Tetra Tech to supply reports/tests/studies for their projects. When Tetra Tech takes the renewable companies pay, they deliver the results the renewable companies want, and this article proves it. Tetra Tech was found to have submitted fraudulent and falsified reports at Hunter Point navy base in California and on native land in Arizona for a uranium mine. No solar or wind project should be permitted if Tetra Tech is supplying any reports/studies or tests documents. Avangrid and Cypress Creek Renewables both developing solar sites in Klickitat County use Tetra Tech. EFSEC accepts Tetra Tech reports as fact never verifying them which makes them derelict in their duties. EFSEC should be eliminated and each county should be in charge of the permitting of renewable project. Each county has jurisdiction and should be allowed to control its future. Greg Wagner C.E.A.S.E.
